

VIDEO 1 · PRODUCTION PACKET

STOP Drinking Your Coffee Like This If You Bloat

A shoot-ready packet: script, thumbnail, clips, and a shoot-day checklist

Prepared for Alina Nazari, FDN-P · Solo, 17 to 19 minutes

GO HAPPY BELLY

ROOT-CAUSE GUT HEALTH

Alina, start here. Section 1 is your script, written the way you would say it. Read it through twice before filming. You do not need to memorize it, just get familiar. The three lines marked as key moments are the ones worth saying word for word. Everything after the script (thumbnail, clips, checklist) is for Steve and the editor, so you can skip it unless you are curious.

WHAT'S INSIDE

| <hr/> | |
| 2. Thumbnail Brief | for the designer |
| <hr/> | |
| 3. Repurposing Plan | for the editor |
| <hr/> | |
| 4. Shoot Day Checklist & Upload Copy | for Steve |
| <hr/> | |

SECTION 1

The Script

Length: 17 to 19 min · **Format:** solo to camera · **One idea:** bloating after coffee is rarely about the coffee, it is about drinking it fasted, too early, in too much volume, and stacked on poor sleep, which throws a stressed system's timing off.

Delivery: conversational and warm. This is NOT an anti-coffee video, say so early and mean it. The small side-notes and colored labels are for editing, do not read them aloud.

0:00 – 0:40 Hook

I am not going to tell you to quit coffee. I want to say that in the first ten seconds because every other video on this topic is secretly building up to "and that is why you need to give it up," and I know that is not what you clicked on, and it is not what I am about to tell you.

ON SCREEN: KEEP YOUR COFFEE. FIX THIS.

What I am going to show you is why coffee makes some women bloated, wired, and strangely more anxious by ten a.m., while other women drink the exact same coffee and feel completely fine. It is almost never the coffee. It is four specific habits around how and when you are drinking it, and by the end I am going to give you the one small change that undoes most of it without you giving up a single cup.

EDITOR Open the "one small change" loop now, pay it off at Point 5. B-roll: a coffee pot pouring, a hand reaching for a mug before anything else has happened that morning, a clock.

0:40 – 1:20 Credential moment

I am Alina Nazari, I am a Functional Diagnostic Nutrition Practitioner, and most of the women I work with are exactly the kind of busy, wired, running-on-fumes woman who would rather skip breakfast than skip coffee. So I am not coming at this from some anti-caffeine place. I drink coffee. This is not that video.

What I am coming at this from is years of watching one specific pattern show up over and over in women who feel bloated, tired, and strangely on edge, all at the same time. And coffee, drunk a certain way, is one of the clearest triggers for it.

VISUAL Warm, direct to camera. Lower third with name and FDN-P appears here.

1:20 – 3:15

Why it hits some women and not others

Here is what I hear constantly. "I wake up already tired. I need coffee just to feel like a person. I drink it, and for a minute I feel sharp, and then an hour later my stomach is upset, I am bloated, and I am somehow more anxious than before I had it." And the advice out there is always the same, cut back on caffeine, switch to decaf, just deal with being tired. Which, if you are already running on empty, is not advice, it is a punishment.

And here is what nobody tells this woman. Her body is not rejecting coffee. Her body is already running like a car with the engine timing off, every system firing a little out of sequence, tired but wired, hungry but nauseous, wanting to sleep but unable to. And then she pours caffeine into that system, first thing, on an empty stomach, before anything else has had a chance to settle, and it is like flooring the gas pedal on an engine that is already misfiring. Of course something backfires.

ON SCREEN: IT'S NOT THE COFFEE

It is not the coffee. It is the timing. And once you see the four habits that throw the timing off, you can keep the coffee and fix the actual problem.

3:15 – 6:00

Point 1 • The engine timing problem

Let me explain what I mean by timing, because this is the whole video in one idea.

Picture a car engine. When the timing is right, the spark fires at exactly the right moment in the cycle, and everything runs smooth. When the timing is off, even a little, the same fuel, the same spark plug, the same engine produces knocking, stalling, rough idle. Nothing about the fuel changed. The sequence did.

Your nervous system runs your digestion the same way. Stomach acid, digestive enzymes, gut motility, they are all supposed to fire in a sequence, and that sequence is controlled by whether your nervous system thinks it is safe to rest and digest, or whether it thinks it needs to be on alert. When you are chronically stressed, under-slept, and running on

adrenaline just to get through a normal Tuesday, that system starts firing out of sequence before you have had a single sip of coffee.

ON SCREEN: THE ENGINE TIMING IS OFF

This is what I call the Wired-and-Tired pattern, and here is the line I want you to remember, because it explains everything that is about to make sense.

"The food is fine. The system processing it isn't."

KEY LINE Deliver this slowly, it reframes coffee, food, and everything that follows. B-roll: non-clinical animation of an engine with the timing slipping, then the same idea mapped onto a body silhouette. Never imply a diagnosed disease.

6:00 – 9:00 Point 2 • Habit 1, drinking it fasted, first thing

Habit one. You wake up and the very first thing that goes into your body is coffee, on a completely empty stomach, before you have eaten anything at all.

Here is why that lands so hard on a Wired-and-Tired system specifically. Caffeine tells your adrenal glands to release cortisol and adrenaline. That is literally the mechanism, that is how it wakes you up. If your nervous system is already leaning stressed, you are adding a stress hormone spike on top of a stress hormone spike, on a stomach that has nothing in it to buffer any of it. Stomach acid ramps up with nowhere to go. Your gut gets the signal to speed up before it has anything to actually move. That combination is exactly what shows up as that fast, uncomfortable, almost immediate bloating and stomach upset some women get within twenty minutes of their first sip.

ON SCREEN: FASTED COFFEE = DOUBLE STRESS SIGNAL

Notice this is not "coffee is acidic, therefore bad." Plenty of women drink coffee on an empty stomach their whole lives with zero issue, because their system was not already running wired and tired to begin with. Same fuel, different engine. That is the whole point.

EDITOR Split screen, a mug next to an empty plate versus a mug next to a small bowl of food. Keep tone matter-of-fact, not alarming.

9:00 – 11:45

Point 3 • Habit 2, too early and too much

Habit two, and this one surprises people. It is not just that you drink coffee early, it is how early, and how much, relative to what your body is already doing on its own.

Your body actually produces its own natural cortisol spike in the first thirty to sixty minutes after you wake up, it is called the cortisol awakening response, and it is supposed to be what gets you moving. If you are chugging a big coffee the second your eyes open, you are stacking a caffeine-driven cortisol spike directly on top of your body's own natural one, at the exact moment it is already highest. For a Wired-and-Tired system, that is not a gentle nudge awake, that is two alarms going off at once.

And then there is volume. One cup on a calm system is very different from three cups by ten a.m. on a system that is already running hot. Each cup is another spark firing into an engine that has not had a chance to settle from the last one. The bloating, the jitteriness, the wired-but-exhausted feeling by lunchtime, a lot of that is simply too much fuel, too fast, on top of a system that was already misfiring.

ON SCREEN: TWO ALARMS AT ONCE

This is not about never having a second cup. It is about noticing whether your system can actually handle the volume and timing you are giving it, or whether it is already maxed out before coffee even enters the picture.

VISUAL A simple graphic, two rising lines (natural cortisol curve, caffeine curve) stacking into one tall spike. Keep it clean, not clinical.

11:45 – 14:15

Point 4 • Habit 3, stacking it on poor sleep

Habit three, and this is the one I think matters most, because it is the one almost nobody connects to their gut. Drinking coffee, especially in the way we just described, on top of a night of bad or short sleep.

When you are under-slept, your nervous system is already starting the day in that alert, on-guard state, before coffee touches it. Poor sleep alone raises your baseline cortisol and throws off the natural rhythm your gut relies on to know when to rest and digest versus when to stay on alert. So you are not pouring caffeine into a calm, well-rested system that can absorb the jolt. You are pouring it into a system that spent the whole night already firing out of sequence, and now you are asking it to also process food on top of that.

This is why the exact same cup of coffee can feel totally fine on a week where you slept well, and absolutely wreck your stomach on a week where you did not. It was never really about the coffee being different. It was about how much timing damage was already there before the coffee showed up.

ON SCREEN: BAD SLEEP LOADS THE ENGINE FIRST

And this is exactly why "just cut out coffee" so often does not fix it. If sleep is the real driver, you can quit coffee entirely and still bloat, because the underlying timing problem never got addressed.

VISUAL *A tired woman scrolling her phone late at night, then the same woman reaching for coffee the next morning. Warm, relatable, not shaming.*

14:15 – 16:45

Point 5 • How to keep your coffee and fix the timing

So here is the one small change I promised you, and then three more you can layer on if you want to go further.

The single biggest lever is this: do not let coffee be the first thing that enters your body. Have a few sips of water first, and if you can, a small bite of something with protein or fat in it before your first cup, even just a few bites. That alone gives your system a buffer so caffeine is not landing on a completely empty, already-alert stomach. For a lot of women this one change quiets down most of the fast, within-twenty-minutes bloating almost immediately.

Second, give yourself sixty to ninety minutes after waking before that first cup, so you are working with your natural cortisol rise instead of piling directly on top of it. Third, notice your actual volume. You do not need to quit coffee, you need to notice if you are

somewhere around cup three by mid-morning on a system that is already wired, and consider whether cup one or two would actually get you the same lift with a lot less backfire. And fourth, on the nights you know sleep was rough, treat the next morning as a lower-caffeine morning on purpose, because that is the day your system has the least room to absorb the jolt.

ON SCREEN: EAT FIRST, WAIT, WATCH THE VOLUME

None of this is about fear or restriction. It is about giving your engine's timing a chance to catch up before you ask it to also process a stimulant. Most women who make just the first change, eating or drinking water before that first cup, notice a real difference within a few days.

PAYOFF *This closes the loop from the hook. Practical and warm. Show a small bite of food and a glass of water next to the coffee mug on camera (also a clip).*

16:45 – 17:30 Bridge / Call to action

If this changed how you are going to make your coffee tomorrow morning, do one thing for me, subscribe, because I break down this kind of root-cause stuff every week for women who were told the answer was just "drink less coffee" and never got the actual explanation.

And if you are sitting there thinking, okay, this is definitely my mornings, I made a short quiz that walks you through which gut pattern actually fits what you are feeling. It is free, it is in the description, no pressure.

GROW-FIRST *Subscribe is the main ask. Quiz is a soft mention only, link in the description and pinned comment. No call or paid offer in this video.*

17:30 – 18:15 Outro

And if mornings are not the only time your body feels like it is running out of sequence, if stress in general seems to be tangled up with your bloating, I made a whole video on

exactly how stress quietly changes your digestion. I will put it right here, go watch that one next.

Your coffee was never really the enemy. The timing was. Now you know how to fix it.

ON SCREEN: THE TIMING WAS THE PROBLEM

HEADS UP FOR STEVE This outro points to the stress-and-bloating video (YT-005), which is packaged. Confirm it is filmed and live before this video's first upload. If it is not live for this first upload, soften the outro to a plain subscribe ask and add the end-screen link once YT-005 is up. See the checklist.

SECTION 2

Thumbnail Brief

For the designer. Modeled on the proven pattern (face + strong expression + a 2 to 4 word overlay + high contrast), rebuilt in the Go Happy Belly palette.

THE ONE GLANCE

Your coffee isn't the villain, how you're drinking it is. The viewer should feel "wait, I do that" and want the fix.

TEXT ON THE THUMBNAIL

- **Primary (4 words max):** IT'S NOT THE COFFEE
- **Secondary (smaller, terracotta):** FIX THE TIMING

VISUAL CONCEPT

- **Subject:** close crop of Alina, shoulders up, a knowing, slightly conspiratorial "let me tell you the real reason" expression, direct eye contact.
- **Background & color:** solid navy (#1B2D4F) so face and text pop. Primary text in warm cream/white with a subtle dark outline. Secondary text in terracotta (#C67B5C). A thin sage (#7BA987) accent used sparingly.
- **Visual device (pick one):** a coffee cup with a small clock/stopwatch face overlaid, or steam that forms a subtle clock hand, clean and bold, placed low and small. (Alt: a coffee cup icon with a small timing-gear graphic instead of a "no" ring, since the video is not anti-coffee.)

LAYOUT

- Face on the right ~45%, text stacked on the left third, coffee-cup device low and small.
- Test at phone-thumbnail size first. If the words are not readable on a phone at a glance, cut a word.
- Keep the same face framing, palette, and text style as YT-002 and YT-005 and future videos so the channel is recognizable in a grid.
- Do not use a "no" or crossed-out symbol over the coffee cup. The video keeps the coffee, fixes the habit, and a crossed-out cup sends the opposite message before anyone clicks.

COMPLIANCE No condition named, no "adrenal fatigue," no "cure" or "treat." On-brand palette, not Ben's yellow and red. Next step: generate 2 to 3 concept mockups, pick a direction, then a designer finalizes with Alina's real photo. A/B idea for later: "IT'S NOT THE COFFEE" versus "STOP DRINKING IT LIKE THIS."

SECTION 3

Repurposing Plan

For the editor. Five clips cut from the long-form for Reels, TikTok, and YouTube Shorts. Pull the highest-retention moments.

#	Timestamp	Angle	Caption	Hook on screen
1	3:15–4:45	Your digestion runs on timing, not just food. "The food is fine. The system processing it isn't."	Bloated after coffee? It might not be the coffee. Here is what is actually happening. Full video on the channel.	THE FOOD IS FINE
2	6:00–7:30	Why coffee on a completely empty stomach hits a stressed system twice as hard.	If coffee is the very first thing that touches your stomach, this is why it might be backfiring.	DON'T DRINK IT FASTED
3	9:00–10:30	Chugging coffee the second you wake up stacks two cortisol spikes at once.	Drinking coffee the second you wake up? Your body is already spiking on its own. Here is what happens next.	TWO ALARMS AT ONCE
4	11:45–13:15	The same cup of coffee hits differently after a bad night of sleep, and this is why.	Same coffee, same you, but a rough night of sleep changes everything about how it lands.	BAD SLEEP LOADS IT FIRST
5	14:15–15:45	The one small change (eat or drink water first) that quiets most of the fast bloating.	You do not have to quit coffee. Do this one thing before your first sip instead.	KEEP YOUR COFFEE, DO THIS

DISTRIBUTION

- **Order & spacing:** publish the long-form first, then one clip every 2 to 3 days over two weeks. Suggested order: Clip 1, Clip 5, Clip 2, Clip 3, Clip 4.
- **Cross-platform:** same clip to Reels, TikTok, and Shorts. Lead with Instagram (the warm 8K audience).
- **Clip 1** (the aha line reframe) is the strongest, post it first.
- **Clip 5** needs a light adjustment to stand alone as a Short: open with "you do not have to quit coffee" so it never reads as anti-coffee on its own.
- **CTA (grow-first):** "Full video on the channel, subscribe." Pinned comment: soft quiz mention, "free quiz in bio." No paid offer yet.
- Burn in captions (most watch on mute) and keep the first 2 seconds to the hook line above.

SECTION 4

Shoot Day Checklist & Upload Copy

For Steve. Everything to film it and upload it.

1. BEFORE THE SHOOT

- ☐ Alina reads the script out loud twice. Familiarity, not memorization.
- ☐ Lock the 3 word-for-word lines: the hook opener ("I am not going to tell you to quit coffee"), the aha line ("The food is fine. The system processing it isn't."), and the close ("Your coffee was never really the enemy. The timing was.").
- ☐ Wardrobe: solid warm tones (cream, sage, terracotta, navy). No busy patterns, no pure white or black, no big logos.
- ☐ Location: quiet room, soft daylight or a key light, warm non-clinical background. A coffee mug as a prop is fine here, it is on-topic.
- ☐ Water nearby, phone silent, notifications off. Have a mug and a small plate/bowl on set for the Point 5 demo.

2. GEAR & SETUP

- ☐ Camera at eye level, framed chest-up, eyes on the top third.
- ☐ Light in front and slightly to one side, softened. Avoid overhead-only light.
- ☐ Audio is the priority: lav or shotgun mic close to her, not the built-in mic. Record 10 seconds of room tone.
- ☐ Teleprompter app just under or over the lens so her eyeline stays on camera. Slow scroll.
- ☐ Do a 20-second test: focus, exposure, audio levels.

3. DELIVERY NOTES FOR ALINA

- ☐ Talk to one person, not an audience (someone who cannot function without her morning coffee and feels guilty reading "coffee is bad for you" headlines).
- ☐ Say the "I am not telling you to quit coffee" line early with warmth and total conviction, not defensively.
- ☐ Slow down on the hook and the aha line. Pauses read as confidence.
- ☐ Energy slightly higher than feels natural (camera flattens it ~20%).
- ☐ Fine to restart a sentence: pause, clap once (helps the editor), redo the line.
- ☐ Warm and direct, never clinical. This is a "here is what is actually happening" video, not a scare video.

4. SHOT LIST

A-roll: film each section as its own take: Hook, Credential, Problem, Points 1 to 5, Bridge/CTA, Outro.

B-roll (10 to 20 sec each, silent):

- ☐ Coffee pot pouring, a hand reaching for a mug first thing in the morning (hook).
- ☐ A rushed morning scene, an alarm going off, feet hitting the floor (problem).
- ☐ A mug next to an empty plate, then a mug next to a small bowl of food (Point 2, also a clip).
- ☐ A tired woman scrolling her phone late at night, then reaching for coffee the next morning (Point 4).
- ☐ A small bite of food and a glass of water set next to the coffee mug (Point 5, also a clip).

5. ON-SCREEN TEXT (FOR THE EDITOR)

- 0:00: KEEP YOUR COFFEE. FIX THIS. | 2:45: IT'S NOT THE COFFEE
- 4:15: THE ENGINE TIMING IS OFF | 7:15: FASTED COFFEE = DOUBLE STRESS SIGNAL
- 10:00: TWO ALARMS AT ONCE | 12:30: BAD SLEEP LOADS THE ENGINE FIRST | 15:00: EAT FIRST, WAIT, WATCH THE VOLUME | 17:45: THE TIMING WAS THE PROBLEM

6. UPLOAD COPY (PASTE INTO YOUTUBE)

TITLE

STOP Drinking Your Coffee Like This If You Bloat

DESCRIPTION

I am not telling you to quit coffee. In this video I walk through the four specific habits, drinking it fasted first thing, too early, in too much volume, and stacked on top of bad sleep, that throw a stressed nervous system's timing off so digestion runs in the wrong gear. It is almost never the coffee itself. It is the timing. Keep your cup, fix the habits.

If this helped, subscribe. I break down root-cause gut health every week for women who were told the answer was just "drink less coffee."

Curious which gut pattern fits what you are feeling? Take the free quiz: <https://gut-pattern-quiz.scoreapp.com>

Chapters:

0:00 I'm not telling you to quit coffee

16:45 What to do next

Alina Nazari, FDN-P

Go Happy Belly

PINNED COMMENT

The reframe that changes everything: it is almost never the coffee itself, it is drinking it fasted, too early, in too much volume, or on top of bad sleep, all of which throw your system's timing off. Which of the four habits hit closest to home for you? If you want to know which gut pattern is driving yours, the free quiz is in the description.

TAGS

coffee bloating, why does coffee bloat me, coffee on empty stomach, coffee and cortisol, coffee anxiety, caffeine gut health, coffee and gut health, morning coffee habits, gut health, functional nutrition, wired and tired, coffee and bad sleep

FIRST-VIDEO NOTE The outro teases the stress-and-bloating video (YT-005), which is packaged but should be confirmed as filmed and live before this video's first upload. If it is not live for this upload, change the outro to a plain "subscribe so you don't miss it" and add the end-screen link once YT-005 is up.

7. AFTER THE SHOOT

- ☐ Back up the footage in two places before leaving the room.
- ☐ Send footage + this packet to the editor.
- ☐ Generate thumbnail concept mockups, pick a direction, have a designer finalize with Alina's real photo.
- ☐ Do not upload publicly until Steve reviews the edit. Nothing gets posted without Steve's confirmation.

In Gut Health,
Alina Nazari
FDN-P
